Southeast Chapter on Twitter

What is Twitter?:

Twitter is a free social networking service used send and receive short messages, or ‘tweets’, and read “tweets” from other people and organizations.

The Chapter will use Twitter to keep you updated with what’s happening. We tweet links to some of the latest news, events and other information of interest to the Chapter Membership.

Other Tweets to follow:

Here are some other Twitter accounts we think you might like. If you would like to follow them simply click on the link and click the ‘Follow’ button:

ACRP Ambassadors
AAAE
ACI World
TSA
The FAA
Aviation Week

The Southeast Chapter will be using Twitter another tool to communicate with both our membership, as well as network within the aviation community. You will get quick updates on meetings, agendas, programs, and other topics subjects - without cluttering your inbox. You choose whether you want to see the latest news - in real time. The Chapter Leadership hopes that this will be one more way to connect with and network within the chapter membership.

For those who have not used Twitter, here is a link to a video and a couple of explanations that will help you to get started.

Twitter is a social network that is used for micro-blogging. Normally text less than 140 characters, a link or picture.
People, companies, artists, politicians and organizations express themselves, give opinions, advertise, recommend articles etc by means of 140 character messages that are called tweets. In most cases, those tweets are public and accessible to everyone.

Although it is not necessary to be a subscriber to twitter to follow the messages, it is recommended good practice to register and thus get an account via the following website: http://twitter.com/ You'll need a login (preferably that will refer to your name so your contacts will find you more easily) that will be your identification on the twitter network. It is recommended you also fill in the bio section (160 characters) so that your contacts will know who you are (and what your interests are).

For more information or questions about the Southeast Chapter’s Twitter initiative, contact Trevis Gardner, SEC-AAAЕ Marketing Committee Chairman at Trevis.Gardner@TTS.org or @trevisgardner (Twitter)
Baker’s aviation experts have served Commercial, General Aviation and Military clients worldwide for nearly 75 years. *Engineering News-Record* currently ranks Baker 16th in Aviation. Our broad services include:

If you have never had the opportunity to sit at the feet of Sam Hoerter, AAE, former Director of Airports for the Charleston County Aviation Authority (SC) and hear his dissertations on airport management, airports authorities or airport authority members, you have missed a real highlight at an airport convention. Here is a sample of Sam’s recent work reprinted with his permission.

**It’s Not Your Dad’s Buick Anymore**

I enjoyed a thirty year career in the airport management industry, and want to share a couple of interesting observations. First of all, I made it to retirement without being fired or indicted. Secondly (and more to the point), a fascinating reversal took place during those three decades:

Back in the seventies, many men and women who worked at the FBOs (lineman, pilots, customer service reps) were hoping to someday advance to a good career at the airline terminal. Today, it’s vice versa. At the large, professional FBO chains, the linemen and CSRs receive better pay and working conditions than their airline counterparts, and many corporate pilots are former airline jockeys who grew tired waiting for their salaries to increase.

Hard to imagine, but in some ways the scheduled airlines now act as minor leagues providing the training and experience for many who wish to move up to corporate aviation. Why has this state of affairs come about? I’ll oversimplify the situation to place my answer in the clearest form possible: the first class section of a scheduled airliner is moving across the airfield to private aviation. Where the money goes, the good jobs follow.

Once upon a time, owning and operating a corporate aircraft was expensive and burdensome. The cost began to decline with the arrival of fractional ownership, then accelerated with the growth of travel networks that require no ownership or commitment: put down your money, pick up the phone, and we’ll pick you up in a matter of hours.

At the same time that these travel options became more attractive, traditional scheduled airlines have become less attractive to high end travelers. The low fare craze packed every seat in the airplane and delayed departure, and the arrival of TSA transformed the airport terminal into one of the most despised places in modern life.

Prior to retiring in 2007, I conducted a survey of travel patterns at CHS and estimated that 4% of my total passenger traffic had been diverted to our two FBOs. Since that time, I’ve been actively involved in the charter and air taxi industry, and believe those numbers are growing. For example, in addition to the traditional networks of pure turbine aircraft, a new operator is entering the east coast market with turboprop aircraft (orders and options for 100 King Airs). At the lower end of the spectrum, Imagine Air is successfully operating a fleet of single-engine aircraft in a true air taxi network along the mid-Atlantic region.

These are not ma-and-pa air charter outfits, but broadly-based networks combined with sophisticated logistics management systems. Like so much else in our modern world, it’s not the advancement in aviation technology that drives this development—it’s the massive growth in computing power that allows smart operators to maximize efficiency in a business that always struggles with thin margins.
High end travelers who wish to avoid the hassles of traditional airline travel now face a full range of travel options, from transcontinental jets to single-engine aircraft for short hops. These travel services are available without an ownership commitment, they are appropriately priced for one-way travel, and are operated, flown and maintained by professionals. Yes, even the operators of small single-engine aircraft are employing former airline pilots who enjoy an improved quality of life.

Where does this take us in the future? Well, as a pair of investigative reporters was once advised, “Follow the money”. The real money in the scheduled airline business used to be found in the first class section of the airplane. United Airlines once revealed that a third of their passenger revenue was generated by only 8% of their passengers. I believe half of that cadre has already moved across to private aviation. For the reasons stated above, I believe this trend will continue. As more money flows to the other side of the airfield, expect more “exclusive use FBOs” like the new facility in West Palm Beach, and expect more keen competition from the Big Three FBO chains in larger markets. At the traditional airline terminal, expect more of the cattle car operations we’ve come to love, and watch those hordes be herded into larger aircraft. The only way to profit from low-margin passengers is to haul them in volume, so the 50 seat pocket rockets will continue to be retired.

The flip side of this coin is: where is the money not? Well, it’s not at smaller airports that can’t provide the high-end travelers to support a professional FBO, nor can they provide the volume of low-fare airline travelers to fill increasingly larger aircraft. Income disparity is not just a socio-logical concept; the big will get bigger and the small will get smaller in aviation, too. That said, there are still interesting opportunities for mid-sized airports, and useful niches for many smaller airports provided they’re understood and exploited by wise leadership. Unlike the foolish historian who titled his book The End of History, I don’t think this is the end of the matter. I believe I have described an important vector in our industry, one that is creating consequences to which we must respond in the near term. In the long run, no one can ever predict what the human mind will imagine tomorrow, and that’s why it’s so important to stay aware of industry events.

Too many crash investigations are closed with a file that states Pilot Error: Loss of Situational Awareness. Don’t let that be the epitaph for your airport organization.

2014 Sam Hoerter
